SAFETY INFORMATION & OWNERSHIP

CABINET LOCATION & SPECIFICATIONS

For more information regarding the installation location or cabinet specifications, please see “Site Preparation” starting on page 16.

• Appliance is NSF 7 approved.
• Appliance is UL rated for outdoor use.
• Appliance is not suitable for an area where a pressure washer or hose may be used.
• Ensure the location will provide adequate clearances and sufficient airflow for the cabinet.
• Ensure the power supply for the cabinet matches the cabinet specification sheet or cabinet data plate and is within the rated voltage (±5%) Also, ensure the amperage rating of the circuit is correct and the circuit is properly grounded.
• The cabinet should always be plugged into its own individual dedicated electrical circuit. The use of adapter plugs and extension cords is prohibited.

NOTICE TO CUSTOMER

Loss or spoilage of products in your refrigerator/freezer is not covered by warranty. In addition to following recommended installation procedures, run the refrigerator/freezer for 24 hours prior to usage to verify its proper operation.

OUTDOOR USE

All True undercounter units are rated for outdoor use.

• In regions with high dewpoints or humidity, condensation may appear on the glass and around gasket seals. For best operation, keep the unit fully stocked with product.
• In areas where the ambient temperature regularly exceeds 95°F (35°C), vent the rear of the rough opening for optimum performance. Recommended vent size is 4" x 10" (102 mm x 254 mm).
• For the best operation, install your True unit with your outdoor bar/kitchen countertop covering the door or drawer gasket (flush install). The rough opening should be at least 24" (606 mm) deep.

NOTE: DOOR AND DRAWER GASKETS DO NOT PROVIDE A WATERTIGHT SEAL AGAINST THE ELEMENTS.

When the temperature consistently reaches 32°F (0°C) or below, winterize your unit. Remove all product from the unit, unplug or turn the unit off, and place a cover over the unit.

CUSTOM OVERLAY PANEL SPECIFICATIONS

Overlay units can be fitted with custom panels to match adjacent cabinetry. Please see this section for recommended panel specifications.

**NOTE: PANEL HEIGHT CAN EXCEED THESE RECOMMENDATIONS BASED ON ROUGH OPENING SIZE AND CABINET SPECIFICATIONS.**

True units assume 3/4" (19mm) thick overlay panels of the specified width (see specifications tables) to be supplied by the end user or others. Thicker/wider panels increase the potential for panel interference. See fig. 1.

**NOTE: THIS INTERFERENCE CAN BE MINIMIZED WITH A 90° DOORSTOP. SEE “90° DOORSTOP INSTALLATION” (PAGE #).**

FIG. 1. Door front pre-drilled hole locations and measurements.
ADDITIONAL DRAWER OVERLAY PANEL INFORMATION

- Custom drawer overlay panels must be at least 23-7/8" (607 mm) x 13-5/8" (346 mm) x 3/4" (19 mm) to cover the panel-ready door front. Your panel dimensions may vary based on the rough opening size and/or adjacent cabinetry specifications.

- Drawer fronts have pre-drilled holes to assist overlay panel installation. See fig 2.

**FIG. 2.** Drawer front pre-drilled hole locations and measurements.
PRIOR TO INSTALLATION

ELECTRICAL INSTALLATION & SAFETY

NEVER USE AN ADAPTER PLUG! An adapter plug alters the original OEM plug configuration when connecting it to a power source.

TRUE will not warranty any refrigerator/freezer that has been connected to an adapter plug.

USE OF EXTENSION CORDS

NEVER USE AN EXTENSION CORD! An extension cord is determined to be any component that adds length to the original OEM power cord when connecting it to a power source.

TRUE will not warranty any refrigerator/freezer that has been connected to an extension cord.

CUTOUT OPENINGS

To minimize the depth of the cutout opening, the electrical outlet must be positioned as shown below. Outlet must be flush with the wall.

NEMA PLUG CONFIGURATIONS

60 HZ USE ONLY!

TRUE uses these types of NEMA plugs shown. If you DO NOT have the proper outlet, have a licensed electrician verify and install the correct power source.

INTERNATIONAL (IEC) PLUGS ONLY

International cabinets may be supplied with a power cord that will require installation. Install this cord before connecting the unit to a power source.

NOTE: INTERNATIONAL PLUG CONFIGURATIONS WILL VARY BY COUNTRY AND VOLTAGE

INSTALLATION

Fully seat the power cord into the cabinet receptacle until it locks in position. See fig. 1.

REMOVAL

Depress the red button. See fig. 2.

FIG. 1. Fully insert the power cord into the receptacle.

FIG. 2. Push the red button to remove the plug.
PRIOR TO INSTALLATION

ELECTRICAL INSTALLATION & SAFETY (CONT.)

HOW TO CONNECT ELECTRICITY

- The power cord from this appliance is equipped with a grounding plug which minimizes the possibility of electric shock hazard.

- The wall outlet and circuit should be checked by a licensed electrician to make sure the outlet is properly grounded.

- If the outlet is a standard 2-prong outlet, it is your personal responsibility and obligation to have it replaced with the properly grounded wall outlet.

- **DO NOT**, under any circumstances, cut or remove the ground prong from the power cord. For personal safety, this appliance must be properly grounded.

- Before your new unit is connected to a power supply, check the incoming voltage with a voltmeter. If the recorded voltage is less than the rated voltage for operation (+/-5%) and amp rating, correct immediately. Refer to cabinet data plate for this voltage requirement.

- The refrigerator/freezer should always be plugged into a dedicated electrical circuit. This provides the best performance and prevents building wiring circuits from being overloaded, which could cause a fire hazard from overheated wires.

- **NEVER** unplug your refrigerator/freezer by pulling on the power cord. Always grip plug firmly and pull straight out from the outlet.

- When moving the refrigerator/freezer, for any reason, be careful not to roll over or damage the power cord.

- Repair or replace immediately all power cords that have become frayed or otherwise damaged. **DO NOT** use a power cord that shows cracks or abrasion damage along its length or at either end.

- If the supply power cord is damaged, it should be replaced with original equipment manufacturer (OEM) components. To avoid hazard this should be done by a licensed service provider.

FIG. 3. Be sure the rear leveling legs slide into the brackets.
3. Position the anti-tip brackets and mark the mounting hole locations.

4. With a 1/8" drill bit, drill pilot holes at the marked locations.

   **NOTE:** BE SURE TO USE A DRILL BIT APPROPRIATE FOR YOUR FLOORING MATERIAL.

5. With the appropriate provided hardware, install the anti-tip brackets. See fig. 2.

   **NOTE:** THE CONCRETE SCREWS ARE BLUE.

6. Carefully position the unit in its final installation location. Be sure the rear leveling legs slide into the anti-tip brackets. See fig. 3.

   **NOTE:** DO NOT LIFT THE CABINET BY THE COUNTERTOPS, DOORS, DRAWERS, OR GRILLS.

**LEVELING LEGS**

Standard leveling legs are provided to assist with leveling the cabinet.

**PROCEDURE**

With access to the bottom of the cabinet, turn the leveling legs to adjust the level as needed. See figs. 1 and 2.

**2-1/2" (64mm) LEVELING LEGS**

2-1/2" (64 mm) leveling legs raise the minimum height of the unit to 33-3/4" (857.25 mm). The leveling legs are adjustable up to 1" (25.4 mm), raising the maximum height of the unit to 34-3/4" (882.7 mm). If so desired, you can order a taller grill to hide the gap caused by the 2-1/2" leveling legs. Please contact our parts department at 844-849-6226 or TrueResidentialParts@TrueMfg.com.

**PROCEDURE**

1. Access the bottom of the cabinet.

2. Remove the existing standard leveling legs. See fig. 3.

3. Thread the new leveling legs into the bottom of the cabinet. See fig. 4.

4. Verify the level of the cabinet. If the cabinet is not level, gently lift and support the low end of the cabinet. Then, adjust the bottom stem of the leveling leg to level and support the cabinet. See fig. 5.

---

**FIG. 1.** Turn the leveling legs clockwise to lower the unit.

**FIG. 2.** Turn the leveling legs counterclockwise to raise the unit.

**FIG. 3.** Remove the existing leveling legs.

**FIG. 4.** Screw in the leveling legs.

**FIG. 5.** Turn the bottom stem to level the cabinet.
LEVELING

Proper leveling of your TRUE unit is critical to operating success. Leveling impacts effective condensate removal and door operation.

With the cabinet in the final installation location, level the unit front-to-back and side-to-side.

PROCEDURE

1. Position the level on the inside floor of the unit near the doors (the level should be parallel to cabinet front). Level the cabinet.

2. Position the level at the inside rear of the cabinet (again, the level should be placed parallel to cabinet back). Level the cabinet.

3. Perform procedures similar to steps 1 and 2 by placing the level on the inside floor (left and right side, parallel to the depth of the cooler). Level the cabinet.

KICKPLATE INSTALLATION

PROCEDURE

1. Locate the kickplate secured to the back of the unit.

2. Position the kick plate below the door. See fig. 1.

3. Verify the kickplate correctly aligned. Adjust as needed.

SHELF INSTALLATION

PROCEDURE

1. Hook the shelf clips into the shelf standards. See fig. 1.

2. Push up on the bottom of the clip. See fig. 2.

   **NOTE:** YOU MAY NEED TO SQUEEZE OR TWIST THE BOTTOM OF THE SHELF CLIP FOR PROPER INSTALLATION. POSITION ALL FOUR SHELF CLIPS EQUAL IN DISTANCE FROM THE FLOOR FOR FLAT SHELVES.

3. Ensure the shelf clip is not loose or able to wiggle out of the shelf standard. See figs. 3 and 4.

4. Place the shelves on the shelf clips with the cross support bars facing down.

   **NOTE:** BE SURE ALL SHELF CORNERS ARE PROPERLY SEATED.

INSTALLATION TIPS

- Install all the shelf clips before installing any shelves.
- Start at the bottom shelf and work your way up.
- Always lay the back of each shelf down on the rear clips before the front.

**WARNING – DO NOT USE PLIERS OR ANY CRIMPING TOOLS WHEN INSTALLING SHELF CLIPS. ALTERING SHELF CLIPS IN ANY WAY CAN LEAD TO SHELVING INSTABILITY.**
LOGO INSTALLATION

For door units, the TRUE logo ships separately to keep the door field reversible. For instructions on reversing the door, see “Reversing Door” (page 65).

When the door is oriented as desired, install the logo as described below.

PROCEDURE

1. Locate the logo in the interior packaging. See fig. 1.

2. Determine the desired location for the logo. True typically puts the logo at the midpoint (see fig. 2).

3. Remove the sticker backing and apply the logo to the door. See figs. 3 and 4.

**IMPORTANT WARRANTY INFORMATION**

**THE CLEANING OF THE CONDENSER IS NOT COVERED BY WARRANTY!**

If you have any questions, please contact your local TRUE Manufacturing Service Department. See contact information on pages 12, or 70.

- Condenser coils accumulate dirt and require cleaning every 30 days or as needed.
- A dirty condenser coil can result in non-warranted repairs and/or cabinet failure.
- Proper cleaning involves removing dust from the condenser by using a soft brush, vacuuming the condenser with a shop vac, or using CO\(_2\), nitrogen or pressurized air.
- Do not place any filter material in front of the condensing coil.

**IF YOU CANNOT ADEQUATELY REMOVE THE DIRT, PLEASE CONTACT YOUR LICENSED REFRIGERATION SERVICE PROVIDER.**

**CONDENSATION**

Excessive condensation can be caused by leaving the door/drawer open for long periods of time or running the cabinet with little to no product inside.

**HANDLE TIGHTENING**

Tighten the handle with a 3/32” Allen wrench.
STAINLESS STEEL OPPONENTS

There are three basic things which can break down your stainless steel’s passivity layer and allow corrosion to rear its ugly head.

- Scratches from wire brushes, scrapers, and steel pads are just a few examples of items that can be abrasive to stainless steel’s surface.

- Deposits left on your stainless steel can leave spots. You may have hard or soft water depending on what part of the country you live in. Hard water can leave spots. Hard water that is heated can leave deposits if left to sit too long. These deposits can cause the passive layer to break down and rust your stainless steel. All deposits left from food prep or service should be removed as soon as possible.

- Chlorides are present in table salt, food, and water. Household and industrial cleaners are the worst type of chlorides to use.

STAINLESS STEEL CLEANING AND RESTORATION

Do not use stainless steel cleaners or similar solvents to clean plastic or powder-coated parts. Instead, use warm soapy water.

- For routine cleaning and removal of grease and oil, apply white vinegar, ammonia, or any good commercial detergent* with a soft cloth or sponge.

- Stainless steel polish (i.e., Zep® Stainless Steel Polish, Weiman® Stainless Steel Cleaner & Polish, Nyco® Stainless Steel Cleaner & Polish, or Ecolab® Ecoshine®) and olive oil can act as a barrier against fingerprints and smears.

- Degreasers* (i.e., Easy-Off® Specialty Kitchen Degreaser or Simple Green® Industrial Cleaner & Degreaser) are excellent for removal of grease, fatty acids, blood and burnt-on foods on all surfaces.

- For restoration/passivation or removing stubborn stains and discoloration, Brillo® Cameo®, Zud® Cleanser, Ecolab® Specifix™ First Impression® Metal Polish, Sheila Shine, or talc can be applied by rubbing in the direction of the polish lines.

*Do not use detergents or degreasers with chlorides or phosphates.

NOTE: THE USE OF PROPRIETARY NAMES IS INTENDED FOR EXAMPLE ONLY AND DOES NOT CONSTITUTE OR IMPLY AN ENDORSEMENT. OMISSION OF PROPRIETARY CLEANSERS FROM THIS LIST DOES NOT IMPLY INADEQUACY.
8 TIPS TO HELP PREVENT RUST ON STAINLESS STEEL

- **Maintain the Cleanliness of Your Equipment** – Avoid build-up of hard stains by cleaning frequently. Use cleaners at the recommended strength (alkaline chlorinated or non-chloride).

- **Use the Correct Cleaning Tools** – Use non-abrasive tools when cleaning your stainless steel products. The stainless steel’s passive layer will not be harmed by soft cloths and plastic scouring pads.

- **Clean Along Polishing Lines** – Polishing lines (“grain”) are visible on some stainless steels. Always scrub parallel to polishing lines when visible. Use a plastic scouring pad or soft cloth when you cannot see the grain.

- **Use Alkaline, Alkaline-Chlorinated or Non-Chloride Cleaners** – While many traditional cleaners are loaded with chlorides, the industry is providing an ever increasing choice of non-chloride cleaners. If you are not sure of your cleaner’s chloride content, contact your cleaner supplier. If they tell you that your present cleaner contains chlorides, ask if they have an alternative. Avoid cleaners containing quaternary salts, as they can attack stainless steel, causing pitting and rusting.

- **Rinse** – When using chlorinated cleaners, you must rinse and wipe dry immediately. It is better to wipe standing cleaning agents and water as soon as possible. Allow the stainless steel equipment to air dry. Oxygen helps maintain the passivity film on stainless steel.

- **Never Use Hydrochloric Acid (Muriatic Acid) on Stainless Steel** – Even diluted, hydrochloric acid can cause corrosion, pitting and stress corrosion cracking of stainless steel.

- **Water Treatment** – To reduce deposits, soften hard water when possible. Installation of certain filters can remove corrosive and distasteful elements. Salts in a properly maintained water softener can also be to your advantage. Contact a treatment specialist if you are not sure of the proper water treatment.

- **Regularly Restore & Passivate Stainless Steel** – Stainless steel gets its stainless properties from the protective chromium oxides on its surface. If these oxides are removed by scouring, or by reaction with harmful chemicals, then the iron in the steel is exposed and can begin to oxidize, or rust. Passivation is a chemical process that removes free iron and other contaminants from the surface of stainless steel, allowing the protective chromium oxides to re-form.

UNDERCOUNTER

How do I adjust the temperature?
Please see "Change the Set Point" (page 55).

Why does the evaporator fan motor constantly run?
This is normal. The evaporator fan motor runs continuously to ensure even temperature throughout your cabinet. The fan only stops when the door is opened to prevent warm air from being circulated throughout the cabinet.

Why isn’t my unit cooling correctly?
Check for any obstructions to the condenser coil (located behind the kickplate). Confirm the area around the condenser coil is clean.

How do I adjust or remove shelving?
Please see "Shelf Installation" (page 40).

Why is there warm air coming from the bottom/front of the unit at the kickplate?
This is normal. The heat from the compressor is blown out through the kickplate.

Why is there condensation forming on the inside/outside of the unit?
Condensation can form when the door is left open for a long period of time or the unit runs with little to no product inside. Moisture can also form on applications installed side-by-side or on sides with 0” clearance; to prevent this, leave at least a 5/8” (1.58 cm) gap between the cabinets, or install foam pads between the cabinets and on any side with 0” clearance. To order foam pads, contact our parts department at 844-849-6226 or TrueResidentialParts@TrueMfg.com.

How much clearance is needed to have the hinges next to the wall and still allow the door to open 90°?
2” (51 mm)
FREQUENTLY ASKED QUESTIONS (CONT.)

Can I put units flush against each other without spacing?
In areas with typical climate-controlled temperature/humidity, yes, True cabinets can be installed side-by-side without spacing. However, in humid, non-climate controlled areas, be sure to leave at least a 5/8” (1.58 cm) gap between the cabinets, or install foam pads between the cabinets and on any side with 0” clearance, to prevent moisture from developing. To order foam pads, contact our parts department at 844-849-6226 or TrueResidentialParts@TrueMfg.com.

Does True sell wooden overlay doors?
No, True does not. For wooden overlay doors, reach out to a cabinetmaker and provide the overlay template available in our document library: http://www.true-residential.com/support/document-library.

Do True units have zero clearance hinges?
Yes, the unit can be installed flush with adjoining cabinetry and still open fully.

What is the decibel rating of the units?
42-47 dB.

I don’t see a service company in my area.
Who can I call?

Does my unit have to be covered outdoors?
It is recommended that units are installed in a covered application. All True undercounter units are UL rated for outdoor use. If left exposed to the elements throughout the winter, a cover will help preserve the life and beauty of your True unit. Please see “Outdoor Use” (page 13) for more detail.

What should I do in the winter? Do I have to bring the unit inside? How cold can the weather get before it’s a problem?
When the temperature consistently reaches 32°F (0°C), remove all product from the unit and unplug or turn the unit off. If the unit is exposed to the elements, covering the unit extends its life and beauty.

TWO-YEAR PARTS & LABOR WARRANTY
TRUE® warrants to the original purchaser of every new TRUE refrigerated unit, the cabinet and all parts thereof, to be free from defects in material and workmanship under normal and proper use and maintenance as specified by TRUE and upon proper installation and start-up in accordance with the instruction packet supplied with each TRUE unit. TRUE’s obligation under this warranty is limited to a period of two (2) years from the date of original installation. Any warranty coverage is dependent on the purchase date of the cabinet being within 27 months of the original ship date from TRUE.

ADDITIONAL THREE-YEAR COMPRESSOR WARRANTY
In addition to the Two (2) year warranty stated above, TRUE warrants its hermetically and semi-hermetically sealed compressor to be free from defects in both material and workmanship under normal and proper use and maintenance service for a period of three (3) additional years from the date of original installation. Any part covered under this warranty that is determined by TRUE to have been defective within this time frame, is limited to the repair or replacement, including labor charges, of defective parts or assemblies. Compressors determined by TRUE to have been defective within this extended time period will, at TRUE’s option, be either repaired or replaced with a compressor or compressor parts of similar design and capacity. The three (3) year extended compressor warranty applies only to hermetically and semi-hermetically sealed parts of the compressor and does not apply to any other parts or components, including, but not limited to: cabinet, paint finish, temperature control, refrigerant, metering device, driers, motor starting equipment, fan assembly or any other electrical component, etcetera.

COMPRESSOR WARRANTY
The three (3) year compressor warranty detailed above will be voided if the following procedure is not carefully adhered to:
1. This system contains R600 refrigerant and polyol ester lubricant. The polyol ester lubricant has rapid moisture absorbing qualities. If long exposure to the ambient conditions occur, the lubricant must be removed and replaced with new. For oil amounts and specifications please call TRUE technical service department (855-372-1368). Failure to comply with recommended lubricant specification will void the compressor warranty.
2. Drier replacement is very important and must be changed when a system is opened for servicing. An OEM exact replacement should be used. The new drier must also be the same capacity as the drier being replaced.
3. Micron level vacuums must be achieved to ensure low moisture levels in the system. 500 microns or lower must be obtained.

DISPLAY PRODUCTS
True Residential Products on showroom display that are sold more than 2 years and 3 months (27 months) from the invoice date to the dealer would carry a 1 year parts and labor warranty, along with an additional 2 year compressor, parts only warranty.

TERMS APPLICABLE TO EACH WARRANTY
Any part covered under the above warranties that is determined by TRUE to have been defective within the time frame is limited to the repair or replacement, including labor charges, of defective parts or assemblies. The labor warranty shall include standard straight time labor charges only and reasonable travel time, as determined by TRUE.

WARRANTY CLAIMS
All claims for labor or parts must be made directly through TRUE. All claims should include: model number and serial number of cabinet, proof of purchase, and date of installation. In case of warranted compressor, the compressor model tag must be returned to TRUE along with the above listed information. Any action for breach of these warranty provisions must be commenced within three (3) months of the defect giving rise to the breach.

NO CONSEQUENTIAL DAMAGES
TRUE is not responsible for economic loss, profit loss; or special, indirect or consequential damages, including without limitation, losses or damages arising from food or product spoilage claims whether or not on account or refrigeration failure.
