To ensure a proper installation, this checklist should be completed to ensure that no part of the process has been overlooked.

☐ Have all packaging materials been removed?

☐ Have the anti-tip brackets been installed securely and are they properly engaging the unit?

☐ Is the unit leveled properly with all leveling legs making contact with the floor? Has the toe kick been installed?

☐ Has door stop been installed (if needed)?

☐ Are panels attached securely and properly aligned? (Overlay cabinets only).

☐ Does the customer understand the unit’s operation?

☐ Has the customer been given the key and literature package?

☐ Have stainless steel surfaces been inspected for any imperfections? This is to be done by the authorized True dealer or installer with the customer, upon completion of installation. Stainless steel doors, handles and shelves are covered by a limited 30-day warranty for cosmetic defects.

☐ Is the unit operating properly? If not, is the unit plugged in? Is the control turned on?
OWNERSHIP
To ensure that your unit works properly from the first day, it must be installed properly. We highly recommend a trained refrigeration mechanic and electrician install your True equipment. The cost of a professional installation is money well spent.

Before you start to install your TRUE unit, carefully inspect it for freight damage. IF DAMAGE IS DISCOVERED, DO NOT INSTALL THE UNIT OR PUT IT IN SERVICE. Notify True customer service, and immediately file a claim with the delivery freight carrier.

TRUE is not responsible for damage incurred during shipment.

For any questions about installation, please contact your True dealer or True Residential Technical Service at 844-746-9423 or TrueResidentialService@TrueMfg.com. Please have your model and serial number available.

WARNING – Use this appliance for its intended purpose as described in this Installation Manual.

REFRIGERANT SAFETY & WARNING INFORMATION
See the serial label inside the cabinet for the units refrigeration type. For Hydrocarbon Refrigeration (R-600A only), see below:

DANGER – Risk of fire or explosion. Flammable refrigerant used. DO NOT use mechanical devices to defrost refrigerator. DO NOT puncture refrigerant tubing; follow handling instructions carefully. To be repaired only by trained service personnel.

DANGER – Risk of fire or explosion (flammable refrigerant used), consult repair manual/owner’s guide before attempting to service this product. All safety precautions must be followed. Dispose of properly in accordance with local and federal regulations. Follow all safety precautions.

CAUTION – Keep all ventilation openings clear of obstruction in the appliance enclosure or in the structure housing the appliance.
SAFETY INFORMATION & OWNERSHIP

BASIC SAFETY & WARNING PRECAUTIONS

- Take care during operation, maintenance or repairs to avoid cuts or pinching from any part/component of the cabinet.

- Units may pose a tipping hazard while uncrating, during installation, or when moving the unit.

- Ensure the unit is properly installed and located in accordance with the Installation Instructions before use.

- This appliance is not to be used, cleaned or maintained by persons (including children) with reduced physical, sensory or mental capabilities or lack of experience and knowledge, unless they have been given supervision or instruction.

- **DO NOT** allow children to play with the appliance or climb, stand, or hang on the unit's shelves to prevent damage to the refrigerator and personal injury.

- **DO NOT** touch the cold surfaces in the freezer compartment when hands are damp or wet. Skin may stick to these extremely cold surfaces.

- **DO NOT** unplug the refrigerator before cleaning and making repairs.

- Setting temperature controls to the 0 position or powering off an electronic control may not remove power from all components (e.g., light circuits, perimeter heaters, and evaporator fans).

- **DO NOT** store or use gasoline, or other flammable vapors and liquids, in the vicinity of this or any other appliance.

- **DO NOT** store explosive substances such as aerosol cans with a flammable propellant in this appliance.

- Keep fingers out of the “pinch point” areas; clearances between the doors and cabinet are necessarily small; be careful closing doors when children are in the area.

- **DO NOT** use electrical appliances inside the food storage compartments of the units unless the appliances are of the type recommended by the manufacturer.

PROPER DISPOSAL OF THE CABINET

Child entrapment and suffocation are not problems of the past. Junked or abandoned refrigerators are still dangerous, even if they will sit for “just a few days.” If you are getting rid of your old refrigerator, please follow the instructions below to help prevent accidents.

**Before throwing away your old refrigerator or freezer:**

- Take off the doors.

- Leave the shelves in place so that children may not easily climb inside.

**DANGER – Risk of fire or explosion.** Flammable insulation and/or refrigerant used. Dispose of all in accordance with local and federal regulations. Follow all safety precautions.
SAFETY INFORMATION & OWNERSHIP

NOTICE TO CUSTOMER
Loss or spoilage of products in your refrigerator/freezer is **not covered by warranty**. In addition to following recommended installation procedures, run the refrigerator/freezer for 24 hours prior to usage to verify its proper operation.

REGISTER YOUR PRODUCT
To qualify for TRUE’s extended 7–12 year parts only sealed system warranty, you must register your product* within 12 months of the unit’s installation date. To register your unit, complete and submit the form at www.true-residential.com/product-registration.
For warranty details, please see page 92.

*Please note that ice machines do not qualify for this extended warranty.

CONTACT INFORMATION
For any questions about installation, please contact your TRUE dealer or TRUE Residential Technical Service. Please have your **model** and **serial number** (see serial label location below) available so we can better assist you with your service- or parts-related inquiries.

SERIAL LABEL LOCATION
Your serial label contains important information such as your model name and serial number. The label is located on the upper left interior wall.
SAFETY INFORMATION & OWNERSHIP

OUTDOOR USE

All True undercounter units are rated for outdoor use.

- In regions with high dewpoints or humidity, condensation may appear on the glass and around gasket seals. For best operation, keep the unit fully stocked with product.

- In areas where the ambient temperature regularly exceeds 95°F (35°C), vent the rear of the rough opening for optimum performance. Recommended vent size is 4” x 10” (102 mm x 254 mm).

- For the best operation, install your True unit with your outdoor bar/kitchen countertop covering the door or drawer gasket (flush install). The rough opening should be at least 24” (606.6 mm) deep.

NOTE: DOOR AND DRAWER GASKETS DO NOT PROVIDE A WATERTIGHT SEAL AGAINST THE ELEMENTS.

WINTERIZING

When the temperature consistently reaches 32°F (0°C) or below, winterize your unit.

1. Remove all product from the unit.
2. Unplug the unit or turn the unit off.
3. Place a cover over the unit.

ELECTRICAL INSTALLATION & SAFETY
ANTI-SWEAT FOAM END PANELS
When installing two or more True units side-by-side, be sure to leave at least 5/8" (16 mm) gap between the cabinets, or install foam pads between the cabinets and on any side without this gap, to prevent moisture from developing on applications. If installing anti-sweat foam end panels, TRUE recommends applying a panel to one of the units being joined together. To order foam pads, contact our parts department at 844-849-6226 or TrueResidentialParts@TrueMfg.com.

CUTOUT OPENINGS
To minimize the depth of the cutout opening, the electrical outlet must be positioned as shown below. Outlet must be flush with the wall.
ROUGH OPENING – SOLID & GLASS DOOR

True’s Stainless Solid and Glass Door units are designed to be inserted into a cabinet opening or free standing. Below are recommended dimensions for rough opening.

**24 INCH**

- **HEIGHT**
  - 34-1/2” (877 mm)

- **DEPTH**
  - 24” (610 mm)

- **WIDTH**
  - 24” (610 mm)

CUSTOM PANEL SPECIFICATIONS

Overlay units can be fitted with custom panels to match adjacent cabinetry. Two specification options for panels sizes are given in these instructions for overlay units: Standard overlays and Integrated Panels. The standard overlay panel dimensions fully cover the provided appliance door. The integrated panel options extend above the door and conceal the hinge assembly to match full overlay cabinet doors. See pictures below for reference.

DOOR OVERLAY PANEL INSTALLATION

Follow the instructions below to install door overlay panels. Door overlay panel installation is the same for solid and glass door units. For custom panel specifications, please see “Custom Panel Specifications” starting on page 25.

NOTE: DO NOT INSTALL A SOLID PANEL ON A GLASS DOOR. THIS MAY CAUSE MOISTURE TO FORM BEHIND THE PANEL, RESULTING IN DAMAGE.

REQUIRED TOOLS

Required tools include (but may not be limited to) the following:

- Surface Protection*
- 3/8” Wrench
- Phillips Bit Driver
- 2+ Clamps ≥ 2” (51 mm)
- 1/8” Drill Bit
- #6 Screws (qty 10)**
- Drill

*Cardboard, moving blanket, foam padding, etc.

**Screw type and length varies by material. All screws must be 1/2” (13 mm) + Overlay Panel Thickness.

PROCEDURE

1. Carefully lay the door overlay panel on a protected surface.

2. Remove the kickplate. See fig. 1.

3. Remove the door from the unit. Leave the hinges installed on the unit. See fig. 2.

   NOTE: BE SURE TO SUPPORT THE DOOR WHILE REMOVING THE HINGE HARDWARE. DO NOT DISCARD.

4. Remove the gasket. See fig. 3.

5. With a 1/8” drill bit, carefully drill the pre-marked pilot holes in the door. See fig. 4.

6. Carefully place the door face down on the overlay panel. Align the door and panel edges. See fig. 5.

7. Clamp the door and panel. See fig. 6

   NOTE: IF THE CLAMP JAWS ARE NOT PADDED, INSERT PADDING BETWEEN THE CLAMP AND THE OVERLAY TO PROTECT THE PANEL’S FINISH.

   IF DESIRED, INSTALL A HANDLE BEFORE PROCEEDING TO THE NEXT STEP. FOR BEST INSTALLATION, FASTEN THE HANDLE WITH RECESSED SCREWS. SEE FIGS. 7 AND 8.

8. Carefully drill pilot holes into the panel. See fig. 6.

   NOTE: TAKE CARE TO NOT DRILL THROUGH THE FRONT OF THE PANEL.

9. Fasten the overlay panel to the door front. Then, remove the clamp(s).

10. Install the door gasket.

   NOTE: VERIFY THE GASKET IS FULLY SEATED IN THE GASKET CHANNEL.

11. Install the door assembly. Verify the door closes correctly and the gasket seals without gaps.

   FIG. 1. Pull the kickplate off the magnets.
PRIOR TO INSTALLATION

FIG. 2. Remove the hinge bolts from top and bottom hinge.

FIG. 3. Pull the gasket from the door.

FIG. 4. Drill pilot holes THROUGH the door assembly.

FIG. 5. Be sure the edges are aligned before clamping the panel and door assembly.

FIG. 6. Be sure to NOT drill through the panel's front.

FIG. 7. Install handles before fastening the overlay panel to the door.

FIG. 8. Door assembly component order.

Gasket — Door — Overlay Panel — Handle
DRAWER OVERLAY PANEL INSTALLATION

Follow the instructions below to install drawer overlay panels. For custom panel specifications, please see “Custom Panel Specifications” starting on page 25.

NOTE: REMOVE THE DRAWER FRONT AS DESCRIBED FOR EASY OVERLAY PANEL INSTALLATION.

REQUIRED TOOLS

Required tools include (but may not be limited to) the following:

• Surface Protection*
• Phillips Bit Driver
• 1+ Clamp ≥ 2" (51 mm)
• 1/8" Drill Bit
• #6 Screws (qty 8)**
• Drill

*Cardboard, moving blanket, foam padding, etc.

**Screw type and length varies by material. All screws must be 1/2" (13 mm) + Overlay Panel Thickness.

PROCEDURE

1. Carefully lay the drawer overlay panel face down on a protected surface.

2. With a Phillips bit driver, remove the drawer front assembly. See fig. 1.

3. Remove the gasket. See fig. 2.

4. With a 1/8" drill bit, carefully drill the pre-marked pilot holes in the drawer front. See fig. 3.

5. Place the drawer front face down on the overlay panel. Align the drawer front and panel edges. See fig. 4.

6. Clamp the drawer front and panel. See fig. 5.

   NOTE: IF THE CLAMP JAWS ARE NOT PADDED, INSERT PADDING BETWEEN THE CLAMP AND THE OVERLAY TO PROTECT THE PANEL’S FINISH.

   IF DESIRED, INSTALL A HANDLE BEFORE PROCEEDING TO THE NEXT STEP. FOR BEST INSTALLATION, FASTEN THE HANDLE WITH RECESSED SCREWS. SEE FIGS. 6.

7. Carefully drill pilot holes into the panel. See fig. 7.

   NOTE: TAKE CARE TO NOT DRILL THROUGH THE FRONT OF THE PANEL.

8. Fasten the overlay panel to the drawer front. Then, remove the clamp(s).

9. Install the drawer gasket.

   NOTE: VERIFY THE GASKET IS FULLY SEATED IN THE GASKET CHANNEL.

10. Install the drawer front assembly. Verify the drawer closes correctly and the gasket seals without gaps.

11. Repeat steps 1-10 for the second drawer.

FIG. 1. Drawer front screw locations. Other side not shown.
PRIOR TO INSTALLATION

FIG. 2. Pull the gasket from the drawer front.

FIG. 3. Drill pilot holes THROUGH the drawer front.

FIG. 4. Be sure the edges are aligned before clamping the drawer front assembly.

FIG. 5. Be sure NOT to drill through the panel’s front.

FIG. 6. Install handles before fastening the overlay panel to the door.
PRIOR TO INSTALLATION

WINE RACK HANDLE & OVERLAY PANEL FINISH APPLICATION

See finish (e.g., paint or stain) for application instructions and drying / curing times. Drying / Curing times vary by finish.

NOTE: Finish odors from panels installed before fully drying /curing can linger and be absorbed by the cabinet’s interior. True is not responsible for lingering finish odors inside the unit.

WINE RACK HANDLES

Follow recommended guidelines associated with treating unfinished natural cherry wood.

NOTE: Remove the wine rack handles from the wine rack assembly before applying finish!

REQUIRED TOOLS

Required tools include (but may not be limited to) the following:

• Phillips Screwdriver or Bit Driver
• Drill (optional)

REMOVAL

1. Gently lift the wine rack handle and pull the wine rack forward. See fig. 1.
2. Remove the wine rack handle from the wine rack assembly. See fig. 2.

INSTALLATION

Finish odors from wine rack handles installed before fully drying /curing can linger and be absorbed by the cabinets interior. True is not responsible for lingering finish odors inside the unit.

1. Install the wine rack handle on the wine rack assembly. See fig. 2.
2. Position the wine rack on the slides and carefully push the wine rack towards the back of the unit. See fig. 3.

NOTE: BE SURE THE WINE RACK SITS UNDER THE SLIDES REAR TABS. SEE FIG. 4.

FIG. 1. Lift and pull the wine rack forward.

FIG. 2. Wine rack handle screw locations.

FIG. 3. Slide the wine rack into place.
OVERLAY PANELS

See finish (e.g., paint or stain) for application instructions and drying / curing times. Drying / Curing times vary by finish.

For overlay panel installation and removal instructions, please see “Solid (OP) And Glass Framed Panel (OG) Installation” (page 30) or “Drawer Overlay Panel Installation” (page 32).

**FIG. 4.** Be sure the wine rack sits under the rear tabs.
TRUE STACKING KIT

24 INCH

15 INCH

24 / 15 INCH SIDE VIEW
STACKING KIT INSTALLATION

KIT CONTENTS

• (1) Louver Grill (stainless models)
• (2) Stacking Brackets
• (4) 1/4" Hex Head Screws

REQUIRED TOOLS

Required tools include (but may not be limited to) the following:

• Floor protector
• Level
• 1/4" Hex Head Driver
• Drill

RECOMMENDED – This procedure may require assistance.
RECOMMANDÉ – Cette procédure peut nécessiter une assistance.

WARNING – Units may pose a tipping hazard during stacking kit installation or when moving the stacked units.
ATTENTION – Les unités peuvent présenter un risque de basculement lors de l’installation du kit d’empilage ou lors du déplacement des unités empilées.

PROCEDURE

1. Position the floor protector near the final installation location.

2. Uncrate the cabinets. Secure the shelving, doors, and drawers.

3. Install the anti-tip brackets (see “Anti-Tip Bracket Installation” on page 45). Verify the brackets are correctly positioned.

4. Carefully place the upper cabinet on the lower cabinet.

NOTE: DO NOT LIFT THE CABINET BY THE COUNTERTOPS, DOORS, DRAWERS, OR GRILLS. THIS STEP MAY REQUIRE ASSISTANCE.

5. Level the upper cabinet.

6. Align the upper cabinet with the lower cabinet’s sides and back.

7. Install the rear stacking brackets. See fig. 1.

8. Position the stacked units in the final installation location.

9. Verify the level of both cabinets. Adjust the leveling legs as needed. See fig. 2.

10. Remove the upper cabinet’s kickplate. See fig. 3.

11. Install the louver grill. See figs 4-6.

NOTE: Be sure to consider air flow when adding a panel to the grill or door.
STACKING KIT INSTALLATION (CONT.)

FIG. 1. The rear stacking brackets.

FIG. 2. Verify the level front-to-back and side-to-side.
STACKING KIT INSTALLATION

**FIG. 3.** Remove the kickplate.

**FIG. 4.** Position the provided grill.

**FIG. 5.** Airflow direction.

**FIG. 6.** Approximate distance from the bottom of the top door to the bottom of the top cabinet.
ELECTRICAL INSTALLATION & SAFETY

PRIOR TO INSTALLATION

The unit is approved by UL for outdoor installation.

USE OF ADAPTER PLUGS

NEVER USE AN ADAPTER PLUG! An adapter plug alters the original OEM plug configuration when connecting it to a power source.

TRUE will not warranty any refrigerator/freezer that has been connected to an adapter plug.

USE OF EXTENSION CORDS

NEVER USE AN EXTENSION CORD! An extension cord is determined to be any component that adds length to the original OEM power cord when connecting it to a power source.

TRUE will not warranty any refrigerator/freezer that has been connected to an extension cord.

• The ice maker should always be plugged into a dedicated electrical circuit. This provides the best performance and prevents building wiring circuits from being overloaded, which could cause a fire hazard from overheated wires.

• Before your new unit is connected to a power supply, check the incoming voltage with a voltmeter. If the recorded voltage is less than the rated voltage for operation (+/-5%) and amp rating, correct immediately. Refer to cabinet data plate for this voltage requirement.

• The electrical outlet must be within 36” (914.4 mm) of the center of the back wall of the ice maker’s final location. Outlet must be flush with wall and comply with local electrical codes.

PRIOR TO INSTALLATION

• The wall outlet and circuit should be checked by a licensed electrician to make sure the outlet is properly grounded.

• The power cord of this appliance is equipped with a 3-prong (grounding) plug which mates with a standard 3-prong (grounding) wall outlet to minimize the possibility of electric shock hazard from this appliance. A 115V AC, 60 Hz, 15 amp circuit breaker and electrical supply are required.

• If the outlet is a standard 2-prong outlet, it is your personal responsibility and obligation to have it replaced with the properly grounded wall outlet.

• **DO NOT**, under any circumstances, cut or remove the ground prong from the power cord. For personal safety, this appliance must be properly grounded.

• When moving the ice maker, for any reason, be careful not to roll over or damage the power cord.

• Repair or replace immediately all power cords that have become frayed or otherwise damaged. **DO NOT** use a power cord that shows cracks or abrasion damage along its length or at either end.

• If the supply power cord is damaged, it should be replaced with original equipment manufacturer (OEM) components. To avoid hazard this should be done by a licensed service provider.

• **NEVER** unplug your ice maker by pulling on the power cord. Always grip plug firmly and pull straight out from the outlet.
ELECTRICAL INSTALLATION & SAFETY (CONT.)

ELECTRICAL OUTLET LOCATION

To minimize the depth of the cutout opening, the electrical outlet must be positioned as shown below. Outlet must be flush with wall.

**NOTE:** COMPRESSOR WARRANTIES ARE VOID IF THE UNIT IS MORE THAN 84" (2134 MM) FROM PLUG-IN CONNECTION OR IF AN EXTENSION CORD IS USED.
UNCRATING

ANTI-TIP BRACKET INSTALLATION

LEVELING

120° DOOR STOP INSTALLATION

KICKPLATE INSTALLATION

90° DOOR STOP INSTALLATION (OPTIONAL)
UNCRATING

REQUIRED TOOLS
• Cutting utensil (utility knife)
• Hammer
• Crowbar
• Phillips head screwdriver
• Floor Protector

PROCEDURE
The following procedure is recommended for uncrating the unit:

1. Remove the outer packaging (cardboard and clear plastic). See fig. 1.

2. Inspect the unit for concealed damage. Immediately file a claim with the freight carrier if there is damage.

3. Cut the plastic band and remove the foam block. See fig. 2.

   NOTE: MOVE THE UNIT AS CLOSE AS POSSIBLE TO ITS FINAL LOCATION BEFORE REMOVING THE SKID.

4. Position the floor protector next to the skid.

5. Carefully lift the unit off the skid and place the unit on the floor protector. See fig. 3.

6. Remove the interior packaging. See fig. 4.

NOTE: KEYS FOR THIS UNIT ARE LOCATED INSIDE THIS PACKET. THE ANTI-TIP BRACKET KIT AND DOOR STOP ARE LOCATED INSIDE THE UNIT.
ANTI-TIP BRACKET INSTALLATION

**IMPORTANT!**
ALL FREE STANDING DRAWER OR STACKED UNITS MUST HAVE ANTI-TIP BRACKETS INSTALLED.

**KIT CONTENTS**
- 2 – Anti-Tip Brackets
- 4 – 3/16” x 2-1/4” Concrete Screws
- 4 – 12 x 2” Phillips Wood Screws

**REQUIRED TOOLS**
- Floor Protector
- Tape Measure
- Marking Utensil
- 1/8” Drill Bit*
- Phillips Bit Driver or 1/4” Hex-Head Driver
- Drill
  *Drill bit type will vary by flooring material.

**CAUTION – ALL UNITS OR STACKED UNITS MUST HAVE ANTI-TIP BRACKETS INSTALLED.**
Install the anti-tip brackets before moving the unit into its final operating position. Contact a qualified flooring installer for the best procedure of drilling mounting holes through your flooring material.

**PROCEDURE**

1. Place the unit on the floor protector.

2. Determine the final installation location of the unit. Measure 27/32” (22 mm) inset from the sides and either 27/32” from the back or 18-1/2” (470 mm) from the front (measure does not include the kickplate). See fig. 1.

3. Position the anti-tip brackets and mark the mounting hole locations.

4. With a 1/8” drill bit, drill pilot holes at the marked locations.

**NOTE: BE SURE TO USE A DRILL BIT APPROPRIATE FOR YOUR FLOORING MATERIAL.**

**FIG. 1.** Top plan view of anti-tip bracket positioning.

**FIG. 2.** Securely fasten the anti-tip brackets to the floor.

**FIG. 3.** Be sure the rear leveling legs slide into the brackets.
ANTI-TIP BRACKET INSTALLATION (CONT.)

1. With the appropriate provided hardware, install the anti-tip brackets. See fig. 2.

   **NOTE: THE CONCRETE SCREWS ARE BLUE.**

2. Carefully position the unit in its final installation location. Be sure the rear leveling legs slide into the anti-tip brackets. See fig. 3.

   **NOTE: DO NOT LIFT THE CABINET BY THE COUNTERTOPS, DOORS, DRAWERS, OR GRILLS.**

LEVELING

Proper leveling of your TRUE unit is critical to operating success. Leveling impacts effective condensate removal and door operation.

With the cabinet in the final installation location, level the unit front-to-back and side-to-side.

PROCEDURE

1. Position the level on the inside floor of the unit near the doors (the level should be parallel to cabinet front). Level the cabinet.

2. Position the level at the inside rear of the cabinet (again, the level should be placed parallel to cabinet back). Level the cabinet.

3. Perform procedures similar to steps 1 and 2 by placing the level on the inside floor (left and right side, parallel to the depth of the cooler). Level the cabinet.
120° DOORSTOP INSTALLATION
All units ship with an optional doorstop. The doorstop restricts the door from opening past approximately 120° to prevent damage to surrounding cabinetry.

REQUIRED TOOLS
Required tools include (but may not be limited to) the following:

- Phillips Screwdriver

PROCEDURE
Install the doorstop on the door’s bottom edge. See figs. 1 and 2.

KICKPLATE INSTALLATION
The kickplate is shipped uninstalled to the unit to allow easy access for leveling. The kickplate attaches to the unit with magnets at the bottom of the unit.

INSTALLATION
1. After leveling the unit, locate the kickplate taped to the back of the unit. See fig. 1.
2. Position the kickplate below the door. See fig. 2.
3. Verify the kickplate is correctly aligned. Adjust as needed.

REMOVAL
Pull the kickplate away from the unit.

FIG. 1. Install the doorstop bracket next to the hinge.

FIG. 2. Installed doorstop.

FIG. 1. The kickplate ships taped to the units back.

FIG. 2. Attach the kickplate to the magnets below the door.
90° HINGE INSTALLATION (OPTIONAL)

KIT CONTENTS

• 90° Hinge (left or right)
• Doorstop Bracket (left or right)

REQUIRED TOOLS

Required tools include (but may not be limited to) the following:

• 3/8" Socket wrench
• Phillips Screwdriver

PROCEDURE

1. Remove the kickplate. See fig. 1.

2. Remove the existing bottom door hinge. See fig. 2.

   **NOTE: BE SURE TO SUPPORT THE DOOR WHILE REMOVING THE HINGE.**

3. Carefully slide the door from the top hinge. See fig. 3.

4. Install the doorstop bracket on the door’s bottom edge. See fig. 4.

5. Position the door and install the 90° hinge. See fig. 5.

   **NOTE: DO NOT COMPLETELY TIGHTEN THE BOLTS.**

6. Verify the door is aligned with the lock latch and light switch. See fig. 6. Verify the door closes correctly and the gasket seals without gaps. Adjust the door as needed.

7. Tighten the hinge bolts.
90° HINGE INSTALLATION (OPTIONAL)

FIG. 4. Doorstop bracket installed on door.

FIG. 5. Installed 90° hinge kit.

FIG. 6. Lock latch and light switch locations.
GLASS SHELF ADJUSTMENT

WINE RACK ADJUSTMENT

DRAFT STANDARD INSTALL & HOOK UP

DRAFT STANDARD INSTALL (COUNTERTOP)

DRIP TRAY INSTALLATION

DISPENSING PRESSURE

TAPPING

DRAFT BEER PROBLEMS

CHANGING CO₂ GAS CYLINDER

CO₂ REGULATOR PRESSURE ADJUSTMENT

DRAFT TOWER CLEANING
GLASS SHELF ADJUSTMENT
The mounting brackets / glide assemblies ship installed on the glide out glass shelves.

INSTALLATION
Hook the mounting brackets / glide assemblies into the pilasters. See fig. 1.

REMOVAL
Carefully lift the shelf assembly up. Then, pull the shelf assembly forward. See fig. 1.

WINE RACK ADJUSTMENT
Wine racks in TBC, TWC, and TWZ-DZ consist of two mounting bracket / glide assemblies and the wire wine rack.

REMOVAL
1. Gently lift the wine rack handle and pull the wine rack forward. See fig. 1.
2. Lift the mounting brackets and pull the brackets forward.
3. Repeat steps 1 and 2 as needed.

INSTALLATION
1. Hook the mounting bracket with the anti-vibration bumpers (see fig. 2) into the hinge-side pilaster.
2. Hook the remaining mounting bracket into the other pilaster.
3. Position the wine rack on the slides and carefully push the wine rack towards the back of the unit. See fig. 3.

NOTE: BE SURE THE WINE RACK SITS UNDER THE SLIDES' REAR TABS. SEE FIG. 4.
4. Repeat steps 1-3 as needed.

CORRECT FIT
The glide’s front tab must fit securely in the gap between the handle and the rack. See fig. 5. If the fit is too tight, loosen the screws on the back of the handle to increase the gap.

The wine shelves are held securely by the anti-vibration bumpers. If there is too much play side-to-side, tighten the bumpers against the compartment walls by rotating them with your fingers.
FIG. 1. Lift and pull the wine rack forward.

FIG. 2. Be sure the anti-vibration bumpers are on the hinged side.

FIG. 3. Slide the wine rack into place.

FIG. 4. Be sure the wine rack sits under the rear tabs.

FIG. 5. The glide’s front tab goes in the gap between the handle and rack.
DRAFT STANDARD INSTALLATION & HOOK UP

REQUIRED TOOLS

- Phillips Screwdriver
- Adjustable Wrench

KIT CONTENTS

A. CO₂ Tank (Shipped empty. Fill before use)
B. Draft Standard*
C. Draft Standard Screws
D. Draft Standard Handles*
E. CO₂ Pressure Regulator
   (single version/double version)
F. Chill Hose**
G. Rubber Washer
H. CO₂ Hoses*
I. Hose Clamps
J. Safety strap
K. Beer Tapper (Sankey, low profile tapper)
   *Double draft standard kit shown.
   **Located inside the cabinet.

WARNING! – CONTENTS UNDER PRESSURE.
TAKE CARE WHEN HANDLING FILLED CO₂ TANKS. IF UNFAMILIAR WITH USING CO₂ TANKS AND/OR REGULATORS, SEEK INFORMATION FROM YOUR LOCAL DISTRIBUTOR OR BREWER REPRESENTATIVE BEFORE PROCEEDING.

PROCEDURE

1. Position the rubber gasket over the mounting holes in the cabinet countertop. See fig. 1.
2. Run the beer line(s) through the hole and into the cabinet. See fig. 2.
3. With the provided hardware, install the draft standard. See fig. 3.
4. Install the draft standard handle(s). See fig. 4.
5. Remove the draft standard top. See fig. 5.

FIG. 1. Position the rubber gasket around the draft tower hole.
FIG. 2. Thread the draft standard lines into the cabinet.
FIG. 3. Secure the draft standard to the countertop.
FIG. 4. Screw the handles on.
6. Hook the chill hose’s clip to the top of the draft standard insulation sleeve. See fig. 6.

**NOTE: DO NOT REMOVE THE INSULATION SLEEVE FROM THE DRAFT STANDARD.**

7. Reinstall the draft standard top.

8. Attach the pressure regulator to the CO₂ cylinder. See fig. 7.

**NOTE: FILL THE CO₂ CYLINDER BEFORE INSTALLATION. DO NOT LAY CO₂ CYLINDERS ON THEIR SIDE. DO NOT DROP CO₂ CYLINDERS.**

9. With the hose clamp(s), connect the provided clear vinyl hose(s) to the pressure regulator. See fig. 7.

**NOTE: MAKE SURE CLAMP IS ON THE HOSE PRIOR TO ATTACHING.**

10. Install the safety strap inside the cabinet. See fig. 8.

11. Position the CO₂ cylinder inside the cabinet. Then, fasten the safety strap around the cylinder. See fig. 9.

12. Attach the tapper to the keg. See fig. 10.

13. With the hose clamp(s), connect the provided clear vinyl hose(s) to the tapper’s air inlet.

**NOTE: MAKE SURE CLAMP IS ON THE HOSE PRIOR TO ATTACHING.**

14. Pressurize the system and check the connection points for leaks. If the system leaks, verify all fittings and clamps are tight and seal correctly.

15. With the hose clamp(s), connect the draft standard line(s) to the tapper.

**NOTE: MAKE SURE CLAMP IS ON THE HOSE PRIOR TO ATTACHING.**

16. Engage the tapper. See fig. 11.

17. Position the keg inside the cabinet.
FIG. 10. Installed and connected tapper. Be sure the hose clamps are tightened to prevent leaks.

Push the tapper down and rotate the tapper clockwise.

ENGAGED

Rotate the tapper counterclockwise.

DISENGAGED

FIG. 11. Engaged tapper vs. disengaged tapper
CABINET SETUP

DRAFT STANDARD INSTALL (COUNTERTOP)

USE THE FOLLOWING PROCEDURE IF INSTALLING THE DRAFT STANDARD DIRECTLY ONTO A COUNTERTOP. SEE FIG. 1.

KIT CONTENTS

• 6” (152.4mm) PVC*
• Coupling*

REQUIRED TOOLS

• 2-5/8” Hole Saw**
• Drill bit appropriate for #10 screw**
• (4) #10 mounting screws (oval head or countersunk)**
• Bit Driver
• Drill
• Food Grade Silicone

**Appropriate for the countertop material and thickness. To be supplied by the installer.

PROCEDURE

1. Determine and mark draft standard and draft standard mounting hole locations. See figs. 2 and 3.

   NOTE: FOR CORRECT INSTALLATION, COUNTERTOP AND UNIT DRAFT STANDARD HOLES MUST ALIGN.

2. With a hole saw, carefully drill draft standard hole through the countertop.

   NOTE: BE SURE THE HOLE SAW IS APPROPRIATE FOR THE COUNTERTOP MATERIAL.

3. With a drill bit, carefully drill draft standard mounting holes in the countertop.

   NOTE: BE SURE THE DRILL BIT IS APPROPRIATE FOR THE COUNTERTOP MATERIAL.

4. Align the unit with the drilled hole. See fig. 4.

FIG. 1. Example of countertop draft standard installation.
**CABINET SETUP**

**DRAFT STANDARD INSTALL (COUNTERTOP)**

**FIG. 2 – 15 INCH MODEL SPECIFICATIONS (TOP VIEW)**

**FIG. 3 – 24 INCH MODEL SPECIFICATIONS (TOP VIEW)**
5. Install the provided coupling and PVC tubing in the draft standard holes. See fig. 5.

**NOTE: DO NOT USE PVC GLUE.**

6. Cut the coupling and PVC tubing flush with the countertop.

7. Apply food grade silicone to any gaps between the PVC tubing and the countertop.

**NOTE: CLEAN EXCESS SILICONE.**

8. Proceed to “Draft Standard Installation & Hook Up.” Be sure to use draft standard mounting screws appropriate for countertop material and thickness.

### Drip Tray Installation

Assemble the drip tray and place it beneath the draft tower spout(s).
DISPENSING PRESSURE

DISPENSING PRESSURES DIFFER ACCORDING TO:
- The type of draft dispensing system
- The length of draft dispensing line
- The actual product - some require more, some require less
- The temperature of the product
- The pressurizing agent: air pressure, CO₂ or special blended gases

HELPFUL HINTS ON MAINTAINING THE CORRECT PRESSURE
- Know which pressurizing agent to use on which product and why
- Monitor your regulators to ensure applied pressure remains constant
- Keep equipment in good repair

TAPPING

Do not agitate the kegs unnecessarily. If excessive agitation occurs allow kegs to settle for 1 to 2 hours before tapping. Prior to tapping the keg, ensure that all beer faucet in the serving location are in the off position. Completely remove the dust cover (identification cap) from the keg.

DRAFT BEER PROBLEMS

TO MINIMIZE DRAFT BEER PROBLEMS, ALWAYS FOLLOW THE RECOMMENDED INSTRUCTIONS FOR TEMPERATURE AND CO₂ PRESSURES FROM YOUR BEER SUPPLIER.

FLAT BEER – Description: Foamy head disappears quickly. Beer lacks usual zestful brewery fresh flavor
- CO₂ turned off when not in use
- Contaminated air source (associated with compressed air)
- Greasy glasses
- Not enough pressure
- Pressure shut off during night
- Loose tap or vent connection
- Sluggish pressure regulator
- Obstruction in lines

FALSE HEAD – Description: Large soap-like bubbles, head dissolves very quickly
- Dry glasses
- Improper pour
- Pressure required does not correspond to beer temperature
- Coils or direct draw beer lines warmer than beer in keg
- Small lines into large faucet shanks
- Beer drawn improperly

WILD BEER – Description: Beer, when drawn, is all foam and not enough liquid beer
- Beer drawn improperly
- Faucet in bad or worn condition
- Kinks, dents, twists or other obstructions in line
- Traps in beer lines
- Beer too warm in kegs or lines
- Too much pressure
- Creeping gauge causing too much pressure

CLOUDY BEER – Description: Beer in the glass appears hazy. Not clear
- Dirty glass or faucet
- Beer over chilled
- Beer temperature variance in keg. (Beer may have warmed up at sometime)
- Hot spots in beer lines
- Cutting beer through faucet
- Beer line in poor condition
- Dirty lines
- Beer that has been frozen

BAD TASTE
- Dirty faucet
- Old or dirty beer lines
- Failure to flush beer lines with water after each empty keg
- Unsanitary conditions at bar
- Foul air or dirt in lines
- Oily air; greasy kitchen air
- Temperature of package too warm
- Dry glasses
CHANGING CO₂ GAS CYLINDER

CAUTION: ALWAYS FOLLOW THESE INSTRUCTIONS
WHEN YOU REPLACE A CO₂ GAS CYLINDER:

1. Close cylinder valve A.
2. Remove tap head D from the barrel. Pull the pressure release ring on body of the tap to release pressure remaining in line. (DO NOT close regulator shutoff C).
3. Remove or loosen regulator key B by turning counter clockwise.
4. Remove the regulator from used cylinder at E.
5. Remove the dust cap from new gas cylinder at outlet E and clear dust from the outlet by opening and closing valve A quickly using appropriate wrench.
6. Attach the regulator to the new cylinder at outlet E. (use new fiber/plastic washer, if required).
7. Completely open valve A.
8. Close valve C.
9. Adjust the regulator key B by turning clockwise to set pressure. Check setting by opening C and pulling and releasing the ring F on the pressure release valve on the body of the tap).
10. Tap the barrel at D with valve C open.

NOTE: DON'T LAY CO₂ CYLINDERS FLAT.
DON'T DROP CO₂ CYLINDERS.

IT REQUIRES 1/2 POUND (0.23 KG) OF CO₂ TO DISPENSE 1/2 BARREL OF BEER AT 38˚F (3.3˚C) WITH 15 PSI (1.03 BAR) OF PRESSURE ON THE BARREL.

CO₂ REGULATOR PRESSURE ADJUSTMENT

Increasing Pressure
1. Close regulator shut-off C.
2. Turn the regulator key B clockwise and adjust setting.
3. Tap the gauge for an accurate reading.
4. Open regulator shut-off C and draw beer.

WARNING: Contents under pressure. Take care when handling filled CO₂ tanks. If unfamiliar with using CO₂ tanks and/or regulators, seek information from your local distributor or brewer representative before proceeding.

Decreasing Pressure
1. Close regulator shut-off C.
2. Untap the barrel at D and to bleed line, activate the tap handle. Leave it in the open position.
3. Slowly open regulator shut-off C and simultaneously turn regulator key B counter-clockwise to zero reading.
4. Close regulator shut-off C and set pressure by turning regulator key B clockwise. Check the setting by opening and closing valve C.
5. Close the tap head D. (Put in OFF position).
6. Tap the barrel at D and open regulator shut-off C.
DRAFT TOWER CLEANING

Regardless of design, draught dispensers must be cleaned regularly. Flushing the draught dispenser with only water is not enough to maintain cleanliness. True recommends cleaning the draught dispenser whenever changing to a fresh keg.

Clean dispensers ensure your draught beer will be at its best when served. Although the beer in the barrel is in excellent condition, the beer can become less satisfying if drawn through a beer line and faucet that are not kept clean.

NOTE: USE CLEANERS APPROVED BY YOUR BEER SUPPLIER AND FOLLOW THEIR INSTRUCTIONS. IF YOU ARE USING THE CLEANING KIT PURCHASED FROM TRUE FOLLOW THE INSTRUCTIONS BELOW.

Prepare Solution:
Add 1/2 ounce (19 grams) of cleaning solution to each quart of warm water. Fill pump bottle with the mixed cleaning solution.

Beer Cleaning instructions:
1. Shut-off the CO₂ at the regulator.
2. Remove the tapping device (keg coupler) from the keg.
3. Unscrew handle from faucet.
4. Remove beer faucet with spanner wrench (turn clockwise to remove). See image 1.
5. Put tap and faucet parts in a bucket.
6. Thread hose from pump bottle to beer column tap outlet (be sure rubber gasket is in place to prevent leakage) - allow beer line to drain in bucket. See Image 2.
7. Pump solution from bottle through the beer line(s) into the bucket. Wait 10 minutes while cleaning solution works through the lines.
8. Use supplied brush to clean beer faucet parts. See Image 3.
9. Rinse parts thoroughly.
10. Rinse bucket, pump bottle and hose thoroughly with clean cool water.
11. Fill pump bottle with clean cool water and pump through lines until water runs clear. (repeat if necessary)
12. When crystal clear water comes through, you’re ready to assemble and reattach faucet and re-tap the keg.

USER INTERFACE COMMANDS

Control is located behind the user interface and can be accessed by removing 3 Phillips screws. This will also give you access to the user interface, and LED driver. Control sequence is as follows:

![Image of control panel]

- **Power**: cuts power to all relays, resumes pulldown.
- **Light**: To turn on accent light.
- **Down**: Press to change set point down, hold to scroll down.
- **Up**: Press to change set point up, hold to scroll up.

KEY COMBINATIONS

- **Up + Down**: Lock / Unlock Keypad
- **Light + Down**: Sabbath Mode
- **Power + Light**: Showroom Mode - Shuts off all refrigeration components. Displays set point. Lights are fully functional.
- **Light + Up**: To switch color LEDs - 14 color TruLumina® patent.
- **Power + Down**: To turn on door ajar alarm & high temperature alarm - Door ajar alarm activates after 7 minutes.

- Refrigerator - High temperature alarm activates after one consecutive hour at or above 50°F.
- Wine Cabinet - High temperature alarm activates after one consecutive hour at or above 70°F.

HOME ALARM SYSTEM – DUAL ZONE WINE CABINET ONLY

Dual Zone wine units are provided with three wires located behind the kick-plate that may be connected to a home alarm system. These connections are for low voltage, low current circuits similar to those used as signals for alarms on doors and windows. Refer to the specifications of your alarm system to determine the type of circuit used.

The color codes for the different circuits are as follows:
- Normally closed contacts: White with black and violet
- Normally open contacts: White with blue and black
- Common: White with black

CAUTION: ANY UNUSED TERMINALS SHOULD BE FULLY INSULATED AND ALL WIRES SHOULD BE SECURED AWAY FROM MOVING PARTS AND SHARP EDGES.
MAINTENANCE, CARE & CLEANING

CONDENSER COIL CLEANING

CONDENSATION

STAINLESS STEEL EQUIPMENT CARE & CLEANING
CONDENSER COIL CLEANING

CAUTION – TAKE CARE DURING OPERATION, MAINTENANCE, OR REPAIRS TO AVOID CUTS OR PINCHING FROM ANY CABINET PART/COMPONENT.

ATTENTION – LORS DE L’UTILISATION, DE L’ENTRETIEN OU DES RÉPARATIONS, IL FAUT PRENDRE SOIN D’ÉVITER LES COUPURES ET LES PINCEMENTS POUVANT SURVENIR AU CONTACT DES PIÈCES OU DES COMPOSANTES DE L’ARMOIRE.

Keeping the condenser coil clean minimizes required servicing and lowers electrical cost. Warranty does not cover cleaning the condenser coil.

**WARNING** – Electrical shock or burn hazard. Unplug the unit or turn off the power supply before proceeding. DO NOT clean appliance with a pressure washer or hose.

**ATTENTION** – Risque d’électrocution ou de brûlure. Débranchez l’appareil ou coupez l’alimentation électrique avant de continuer. Ne nettoyez pas l’appareil avec un nettoyeur haute pression ou un tuyau.

**CAUTION** – Risk of eye injury from debris. Eye protection is recommended.

**ATTENTION** – Les ailettes sont coupantes. Soyez prudent pour éviter les lésions oculaires. Une protection des yeux est recommandée.

**CAUTION** – Coil fins are sharp. Gloves are recommended.

**ATTENTION** – Les ailettes de la bobine sont tranchantes. Les gants sont recommandés.

**REQUIRED TOOLS**

Required tools include (but may not be limited to) the following:

- Gloves
- Eye Protection
- Stiff Bristle Brush
- Vacuum Cleaner
- Flashlight
- Tank of Compressed Air

**PROCEDURE**

1. Remove the kickplate. See fig. 1.
2. With a stiff bristle brush, carefully clean accumulated dirt from the front coil fins. See fig. 2.
3. With the dirt removed from the surface of the coil, use a flashlight to verify you can see through the coil and observe the condenser fan blade spinning. See fig. 3.
4. If the view is clear, reinstall the kickplate, restore power, and verify correct operation.
5. If the view is not clear, gently blow compressed air or CO₂ through the coil until it is clean.
6. Carefully vacuum any dirt around the condensing unit area.
7. Reinstall the kickplate, restore power, and verify correct operation.
MAINTENANCE, CARE & CLEANING

IMPORTANT WARRANTY INFORMATION

NOTE: THE CLEANING OF THE CONDENSER IS NOT COVERED BY WARRANTY!

If you have any questions, please contact your local TRUE Manufacturing Service Department. See contact information on page 8 or 88.

• Condenser coils accumulate dirt and require cleaning every 30 days or as needed.
• A dirty condenser coil can result in non-warranted repairs and/or cabinet failure.
• Proper cleaning involves removing dust from the condenser by using a soft brush, vacuuming the condenser with a shop vac, or using CO$_2$, nitrogen or pressurized air.
• Do not place any filter material in front of the condensing coil.
• On most units, the condenser is accessible by removing the cabinet’s outer grill cover.
• If you cannot remove the dirt adequately, please contact your licensed refrigeration service provider.

CONDENSATION

Excessive condensation can be caused by leaving the door/drawer open for long periods of time or running the cabinet with little to no product inside.

FIG. 1. Pull the kickplate off the magnets.

FIG. 2. Never brush across coil fins.

FIG. 3. Verify all blockages have been removed.
MAINTENANCE, CARE & CLEANING

STAINLESS STEEL EQUIPMENT CARE AND CLEANING

CAUTION: DO NOT USE ANY STEEL WOOL, ABRASIVE OR CHLORINE BASED PRODUCTS TO CLEAN STAINLESS STEEL SURFACES.

STAINLESS STEEL OPPONENTS

There are three basic things which can break down your stainless steel's passivity layer and allow corrosion to rear its ugly head.

- Scratches from wire brushes, scrapers, and steel pads are just a few examples of items that can be abrasive to stainless steel's surface.

- Deposits left on your stainless steel can leave spots. You may have hard or soft water depending on what part of the country you live in. Hard water can leave spots. Hard water that is heated can leave deposits if left to sit too long. These deposits can cause the passive layer to break down and rust your stainless steel. All deposits left from food prep or service should be removed as soon as possible.

- Chlorides are present in table salt, food, and water. Household and industrial cleaners are the worst type of chlorides to use.

STAINLESS STEEL CLEANING AND RESTORATION

Do not use stainless steel cleaners or similar solvents to clean plastic or powder-coated parts. Instead, use warm soapy water.

- For routine cleaning and removal of grease and oil, apply white vinegar, ammonia, or any good commercial detergent* with a soft cloth or sponge.

- Stainless steel polish (i.e., Zep® Stainless Steel Polish, Weiman® Stainless Steel Cleaner & Polish, Nyco® Stainless Steel Cleaner & Polish, or Ecolab® Ecoshine®) and olive oil can act as a barrier against fingerprints and smears.

- Degreasers* (i.e., Easy-Off® Specialty Kitchen Degreaser or Simple Green® Industrial Cleaner & Degreaser) are excellent for removal of grease, fatty acids, blood and burnt-on foods on all surfaces.

- For restoration/passivation or removing stubborn stains and discoloration, Brillo® Cameo®, Zud® Cleanser, Ecolab® Specifix™ First Impression® Metal Polish, Sheila Shine, or talc can be applied by rubbing in the direction of the polish lines.

*Do not use detergents or degreasers with chlorides or phosphates.

NOTE: THE USE OF PROPRIETARY NAMES IS INTENDED FOR EXAMPLE ONLY AND DOES NOT CONSTITUTE OR IMPLY AN ENDORSEMENT. OMISSION OF PROPRIETARY CLEANSERS FROM THIS LIST DOES NOT IMPLY INADEQUACY.
8 TIPS TO HELP PREVENT RUST ON STAINLESS STEEL

- **Maintain the Cleanliness of Your Equipment** – Avoid build-up of hard stains by cleaning frequently. Use cleaners at the recommended strength (alkaline chlorinated or non-chloride).

- **Use the Correct Cleaning Tools** – Use non-abrasive tools when cleaning your stainless steel products. The stainless steel’s passive layer will not be harmed by soft cloths and plastic scouring pads.

- **Clean Along Polishing Lines** – Polishing lines ("grain") are visible on some stainless steels. Always scrub parallel to polishing lines when visible. Use a plastic scouring pad or soft cloth when you cannot see the grain.

- **Use Alkaline, Alkaline-Chlorinated or Non-Chloride Cleaners** – While many traditional cleaners are loaded with chlorides, the industry is providing an ever increasing choice of non-chloride cleaners. If you are not sure of your cleaner’s chloride content, contact your cleaner supplier. If they tell you that your present cleaner contains chlorides, ask if they have an alternative. Avoid cleaners containing quaternary salts, as they can attack stainless steel, causing pitting and rusting.

- **Rinse** – When using chlorinated cleaners, you must rinse and wipe dry immediately. It is better to wipe standing cleaning agents and water as soon as possible. Allow the stainless steel equipment to air dry. Oxygen helps maintain the passivity film on stainless steel.

- **Never Use Hydrochloric Acid (Muriatic Acid) on Stainless Steel** – Even diluted, hydrochloric acid can cause corrosion, pitting and stress corrosion cracking of stainless steel.

- **Water Treatment** – To reduce deposits, soften hard water when possible. Installation of certain filters can remove corrosive and distasteful elements. Salts in a properly maintained water softener can also be to your advantage. Contact a treatment specialist if you are not sure of the proper water treatment.

- **Regularly Restore & Passivate Stainless Steel** – Stainless steel gets its stainless properties from the protective chromium oxides on its surface. If these oxides are removed by scouring, or by reaction with harmful chemicals, then the iron in the steel is exposed and can begin to oxidize, or rust. Passivation is a chemical process that removes free iron and other contaminants from the surface of stainless steel, allowing the protective chromium oxides to re-form.
SERVICING & ADJUSTMENTS

SERVICING & REPLACING COMPONENTS

NOTE: ANY CABINET ADJUSTMENTS ARE TO BE MADE AFTER THE CABINET HAS BEEN VERIFIED LEVEL AND PROPERLY SUPPORTED.

- Replace component parts with original equipment manufacturer (OEM) components.
- Contact the dealer or our parts department at 844-849-6179 or TrueResidentialParts@truemfg.com for replacement parts.
- Have a licensed service provider service your unit to minimize the risk of possible ignition due to incorrect parts or improper service and to ensure the operator’s health and safety.
- Unplug the refrigerator/freezer before cleaning or making any repairs. Powering off an electronic control may not remove power from all components (e.g., light circuits, perimeter heaters, and evaporator fans).

HANDLE TIGHTENING

Tighten the handle with a 3/32” Allen wrench.

CONTACT INFORMATION

For any questions about installation, please contact your TRUE dealer or TRUE Residential Technical Service. Please have your model and serial number (see serial label location below) available so we can better assist you with your service- or parts-related inquiries.

SERIAL LABEL LOCATION

Your serial label contains important information such as your model name and serial number. The label is located on the upper left interior wall.
FREQUENTLY ASKED QUESTIONS

Q. How do I adjust the temperature?  
A. Refer to True Precision Control® Operation listed in Table of Contents on page 64.

Q. Why does the evaporator fan motor run constantly?  
A. This is a normal operation in wine units. The evaporator fan motor will run continuously to ensure even temperature throughout your cabinet. This will only stop when the door is opened to keep warm air from being circulated throughout the cabinet.

Q. Why isn’t my unit cooling properly?  
A. Check to see that there are no obstructions to the condenser coil (behind front grill). Confirm that the condenser area is clean.

Q. How do I adjust or remove a shelf from my current configuration?  
A. Refer to Glass Shelf Adjustment listed in Table of Contents on page 52.

Q. Why is there warm air coming from the bottom/front of the refrigerator (grill/kickplate area)?  
A. This is normal as heat dissipation is part of the refrigeration cycle.

Q. Why is there condensation forming on the inside or outside of the unit?  
A. Leaving the door open for a long period of time or a unit that is running with little to no product inside may also cause excessive condensation.

Q. What are the preset limits for the high temperature alarm?  
A. The electronic control will monitor temperatures and activate an alert if unsafe product temperatures are present for more than 60 minutes. For single and dual zone wine cabinets, the alarm will activate at 70°F. For all refrigerators, the alarm will activate at 50°F.

Q. How much distance is needed from the wall to have the hinge on the wall side and still open 90 degrees?  
A. 2 inches.

Q. Can I put 2 units flush against each other without spacing?  
A. When installing two or more True units side-by-side, be sure to leave at least 5/8" (16 mm) gap between the cabinets, or install foam pads between the cabinets and on any side with 0” clearance, to prevent moisture from developing on applications. If installing anti-sweat foam end panels, True recommends applying a panel to one of the units being joined together. To order foam pads, contact our parts department at 844-849-6226 or TrueResidentialParts@TrueMfg.com.

Q. Does True sell the wood doors on overlay?  
A. No, for wood front doors, reach out to your cabinet maker and provide them with the overlay template available on the right hand side of our document library: http://www.true-residential.com/Support/Document-Library/

Q. Does the overlay come with the handle?  
A. No, our handle can be ordered as an accessory, or any pull can be added to your overlay drawer.
FREQUENTLY ASKED QUESTIONS (CONT.)

Q. Do True units have a zero clearance hinge?
A. Yes. No spacing is needed on the either side of our unit. It can be placed flush with adjoining cabinetry and still open to 90°.

Q. Why doesn’t the warranty cover commercial units in my home?
A. Due to Department of Energy regulations on refrigerator energy use, we are not able to market and sell our commercial units in homes. Providing a warranty to home users is included in this.

Q. What is the Decibel rating of the units?
A. 42-47 db.

Q. How do I change the lighting?
A. For models that include a color button, simply push the button until the desired color appears.

For 15 inch models without a color button press + at the same time until your desired color is reached.

On 24 inch dual zone models press + .

Q. My display was reading “REF” What does that mean?
A. The REF code is shown when the cabinet doesn’t reach the desired set temp in the allotted time. The problem may be that the door was left open or very hot product was loaded into the unit. To reset the code, simply power off, and power on the refrigerator. If the code returns, please contact True for service.

Q. I don’t see a service company in my area, who can I call?
A. Please call True’s service line: 888.616.8783 or email us: info@true-residential.com to have us help find an appropriate servicer for your cabinet.

Q. Does my refrigerator have to be covered outdoors?
A. No. All True undercounter are UL rated for outdoor use.

True units are able to be installed free standing. If left exposed to the elements throughout winter months, a cover will help preserve the life and beauty of your True product.

PLEASE NOTE: THE GASKETS DO NOT PROVIDE A WATER TIGHT SEAL, SO IT IS RECOMMENDED THAT THE UNIT IS INSTALLED SO THAT THE COUNTERTOP OF YOUR OUTDOOR KITCHEN COVERS THE DOOR OR DRAWER GASKET.

Q. What should I do in the winter? Do I have to bring it in? How cold can it get before it’s a problem?
A. In regions with cold winters (consistently below 32ºF), True refrigerators should be turned to off, and emptied of all contents. If exposed to the elements, covering your cooler will extend its life and beauty.

BEVERAGE DISPENSER QUESTIONS

Q. What type of tap system can be used with a True unit?
A. Different tap systems can be used on 1/4 barrel short kegs, but low profile taps are not available in the non-sankey variety, and therefore will probably not fit in our dispensers when used with tall kegs.

Q. Where can I get my CO₂ tank filled?
A. CO₂ is available at many sporting good stores as well as paintball stores. CO₂ canisters can often be exchanged (much like propane tanks) at many liquor stores as well as nationally at AIRGAS locations.
FREQUENTLY ASKED QUESTIONS (CONT.)

WINE CABINET QUESTIONS

Q. Can I store Magnum bottles?
A. Magnums will fit on our floor rack which holds 5 bottles. Also, our shelves are removable to create additional space.

Q. Can I store pinot/Bordeaux/Riesling bottles?
A. Yes. Almost all bottle varieties will fit in your True Wine Cabinet.

DRAWER CABINET QUESTIONS

Q. How tall are the drawers? Can I store an upright bottle of wine, or a gallon of milk?
A. In refrigerator drawers, yes. Please see the drawing below.

---

**REFRIGERATOR DRAWER**

Scale 1 : 8
TRUE RESIDENTIAL® SERIES LIMITED WARRANTY STATEMENT

LIMITED 30 DAY COSMETIC WARRANTY
Stainless steel doors, handles, and shelves are warranted to be free from defective materials or workmanship for a period of thirty (30) days from the date of original retail purchase. Any defects must be reported to the selling dealer within thirty (30) days from the date of original retail purchase. This limited warranty excludes any type of freight / concealed damage.

THREE-YEAR PARTS & LABOR WARRANTY *For units purchased after Feb 1, 2013
TRUE residential warrants the original purchaser of every new TRUE refrigerated unit, the cabinet and all parts thereof, to be free from defects in material or workmanship under normal and proper use and maintenance as specified by TRUE and upon proper installation and start-up in accordance with the instruction packet supplied with each TRUE unit. TRUE’s obligation under this warranty is limited to a period of three (3) years from the date of original installation or thirty nine (39) months after shipment date from TRUE, whichever occurs first. Contact the factory regarding warranty for installations in a commercial/light commercial application.

SIX-YEAR SEALED SYSTEM WARRANTY – PARTS & LABOR *For units purchased after Feb 1, 2013
TRUE warrants its hermetically sealed system: compressor, evaporator coil, condenser coil, drier, metering device and connecting tubing to be free from defects in both material and workmanship under normal and proper use and maintenance service for a period of six (6) years from the date of original installation but not to exceed six (6) years and three (3) months after shipment from the manufacturer, whichever occurs first.

SEVEN THROUGH TWELVE-YEAR SEALED SYSTEM WARRANTY – PARTS ONLY
*For units shipped from True after Feb 1, 2017 and REGISTERED via TRUE’s Product Registration Page - TRUE warrants its hermetically sealed system: compressor, evaporator coil, condenser coil, drier, metering device and connecting tubing to be free from defects in both material and workmanship under normal and proper use and maintenance service period of Twelve (12) years from the date of original installation but not to exceed twelve (12) years and three (3) months after shipment from the manufacturer, whichever occurs first. Product must be registered with TRUE within 12 months of the unit’s installation to qualify for this warranty. Factory seconds and Clear Ice machines are excluded from this warranty.

DISPLAY PRODUCTS
True Residential Products on showroom display that are sold more than 3 years (36 months) from the invoice date to the dealer would carry a 1 year parts and labor warranty, along with an additional 4 year sealed system, parts only warranty.

ADA-COMPLIANT PRODUCTS
True Residential ADA-Compliant models have a separate warranty that is two years parts and labor with an additional three years parts only on the compressor. Full statement can be found under the ADA product Installation Guide.

TERMS APPLICABLE TO EACH WARRANTY
Any part covered under the above warranties that is determined by TRUE to have been defective within the time frame is limited to the repair or replacement, including labor charges, of defective parts or assemblies. The labor warranty shall include standard straight time labor charges only and reasonable travel time, as determined by TRUE.

WARRANTY CLAIMS
All claims for labor or parts must be made directly through TRUE. All claims should include: model number and serial number of cabinet, proof of purchase, and date of installation. In case of warranted compressor, the compressor model tag must be returned to TRUE along with the above listed information.

WHAT IS NOT COVERED BY THIS WARRANTY
TRUE’s sole obligation under this warranty is limited to either repair or replacement of parts, subject to the additional limitations below. This warranty neither assumes nor authorizes any person to assume obligations other than those expressly covered by this warranty.

NO CONSEQUENTIAL DAMAGES
TRUE is not responsible for economic loss, profit loss; or special, indirect or consequential damages, including without limitation, losses or damages arising from food or product spoilage claims whether or not on account or refrigeration failure.

WARRANTY IS NOT TRANSFERABLE
This warranty is not assignable and applies only in favor of the original purchaser/user to whom delivered. Any such assignment or transfer shall void the warranties herein made and shall void all warranties, express or implied, including any warranty or merchantability or fitness for a particular purpose.

IMPROPER USAGE
TRUE assumes no liability for parts or labor coverage for component failure or other damages resulting from improper usage or installation or failure to clean and/or maintain product as set forth in the warranty packet provided with the unit.

ALTERATION OR NEGLECT
TRUE is not responsible for the repair or replacement of any parts that TRUE determines have been subjected after the date of manufacture to alteration, neglect, abuse, misuse, accident, damage during transit or installation, fire, flood, or act of God.

IMPROPER ELECTRICAL CONNECTIONS
TRUE is not responsible for the repair or replacement of failed or damaged components resulting from electrical power failure, high or low voltage, use of extension cords, or improper grounding of the unit.

YOUR RIGHTS UNDER STATE LAW
This warranty gives you specific legal rights and you may have other rights that vary from state to state. Some states do not allow the exclusion or limitation of consequential damages or a limitation on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

ENVIRONMENTAL ATTRIBUTES
Any and all environmental attributes, including environmental offset credit rights, with respect to TRUE refrigeration units manufactured after September 1, 2015, shall remain the property of TRUE Manufacturing Co., Inc. and are not transferred.

OUTSIDE U.S./CANADA
This warranty does not apply to, and TRUE is not responsible for, any warranty claims made on products sold or used outside the United States or Canada.
